
RNA-seq data 105 controls and 61 advanced AMD
Normalization + Batch Correction
Sampling 80% of data for each iteration
ANOVA
AUC
Kruskal-walis
Filter based Feature Selection
1000 Iterations
Split data into 64% train, 16% val, 20% test
XGBoost
Logistic Regression
Neural Network
Random Forest
Adjust for class imbalance
Compile results for 100 iterations, compute ROC, and produce boxplots of scores for each iteration
